

# Project Management

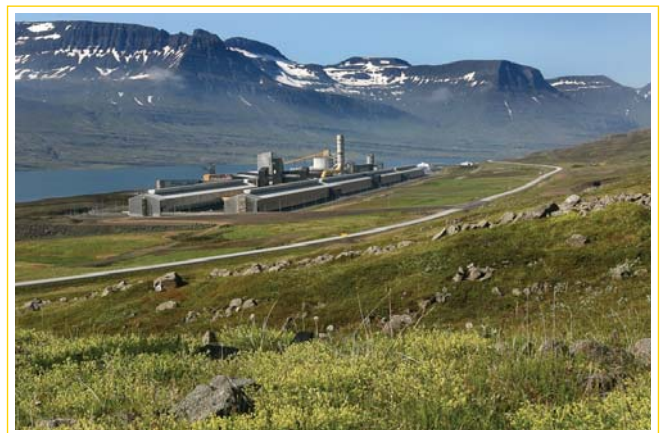

Mannvit has extensive experience and expertise in the field of project management and EPCM having participated in most of the large development projects in the country over the last few years. Company specialists have been involved in all facets of project management including, preliminary work, planning, engineering, procurement, construction management, implementation and reporting.

Construction management is an important facet of project management. And, our consultants have handled numerous construction projects in the fields of structures, roads and bridges, public utilities and power intensive industries.

## Recent project management and EPCM examples:

- Nordural Aluminum Smelter expansion (North of Reykjavik)
- Fjardaal Aluminum Smelter (East Iceland)
- Smaralind Shopping Mall (largest in Reykjavik)

Methodical project management ensures a clear view of operations during all stages of construction. This greatly increases the likelihood that a project will remain within cost while maintaining scheduling commitments. Specialists at Mannvit have been responsible for a diverse range of major projects, ranging from clearly defined development work to complex planning challenges and continue to play a leading role in many forthcoming projects at home and abroad.
